ARIZONA WATER PROTECTION FUND COMMISSION

ARIZONA DEPARTMENT OF WATER RESOURCES

500 North Third Street, Phoenix, Arizona 85004

Telephone (602) 417-2460

Fax (602) 417-2423

JANE DEE HULL
Governor

RITA P. PEARSON
Director

Honorable Jane Dee Hull
Governor of Arizona, and

Honorable Members
Arizona State Legislature

I am pleased to submit to you the third Annual Report of the Arizona Water Protection Fund Commission. This report provides an overview of program accomplishments from July 1, 1997 through June 30, 1998.

This was the third year of our statewide rivers and streams restoration, maintenance and enhancement public grants program. As directed by the authorizing legislation, this year's Commission efforts included conducting extensive public information and input activities to guide future program direction. Also during this year, the Commission continued to hold its business meetings around the state to encourage local and regional input to the Commission and to allow Commissioners the opportunity to view local problems, opportunities and successes.

In fulfilling its main statutory directive, the Commission continued its function of awarding grants through a public application process for river and riparian related projects. The FY 1998 cycle resulted in the award of 19 grants for \$2.5 million. During the previous two grant cycles, the Commission awarded a total of 53 grants for a total of \$12.2 million. At the completion of this year's grant process, grants had been awarded in every county of the State.

The Commission is proud to oversee this important function for the State of Arizona. Please contact me at (602) 248-8482 if I can answer any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Roger S. Manning".

Roger S. Manning,
Chair

Background

In 1994, the Arizona Legislature established the Arizona Water Protection Fund. The purpose of the Fund is to provide monies to the public through a grant process for the implementation of projects to maintain, enhance and restore rivers and streams and associated riparian resources. This includes fish and wildlife that are dependent on these important habitats.

The Fund provides approximately \$5 million annually in grants for projects benefiting rivers and riparian habitat. Any individual or entity, state or federal agency, or political subdivision of Arizona may submit an application for an Arizona Water Protection Fund grant. All projects must be located in Arizona, be consistent with state water law, and respond to the overall goals of the legislation.

The Arizona Water Protection Fund Commission, which oversees the Fund, is comprised of 15 citizen voting members and four non-voting members. The 15 voting members represent a diversity of interests and are appointed by various government entities to serve staggered 3-year terms (Table 1).

The Arizona Department of Water Resources provides staff and administrative support to the Commission. The Commission also provides funding to the Arizona State Land Department for a staff position whose purpose is to assist the Natural Resource Conservation Districts with grant applications and to act as a special liaison to the Commission.

Statement of Problem

Rivers, streams and wetlands are important resources to the people of Arizona. Humans have been using and changing these resources for centuries. And through these centuries, we have learned that proper land and watershed management can make a profound difference in the health of our rivers and wetlands.

There is also an increasing awareness that healthy waterways and their associated riparian areas have economic value. Economic benefits take many forms including ecotourism, recreation, streambank stabilization, fish and wildlife habitat, water quality improvement, groundwater recharge, water storage in streambanks which maintains stream base flows, and food sources for pollinators and insectivores. In addition, real estate that is located on the edge of a riparian area often benefits economically from the area's aesthetic and natural values.

Consider the cost avoidance benefits of flood damage that a healthy riparian area can produce. Barren streambanks will erode quickly during a flood event and can result in the loss of acres of land and topsoil. More than 10,000 acres of land were lost to erosion due to high flood flows in 1993.¹ Soil erosion contributes to siltation in our reservoirs, resulting in loss of water storage capacity and increased dredging costs. In other cases, increased erosion results in deposition

¹ Arizona Game and Fish Department, Statewide Riparian Inventory Database, 1996.

downstream, raising the stream bottom and increasing the threat of floods to adjacent developed lands.

Riparian restoration is valued by the public. But the more degraded a system becomes, the more expensive it is to restore. Take, for instance, the case of the Rio Salado (Salt River) restoration through Mesa, Tempe and Phoenix. The cost of reconstructing this area is estimated at \$84 million.

Commission Member Name	Affiliation/Expertise	Term Expires	Appointing Authority
Adams, Lynda	Member of Public – Hydrologist	1998	Governor
Brick, Paul	Natural Resource Conservation Districts	1998	Governor
Beyer, William	Member of Public - Engineer	2000	Senate President

Philosophy

The Fund is intended to be a proactive response to possible federal intervention in Arizona's stream and riparian resource issues. The Fund was created to address river and riparian associated issues in a proactive way, through the use of incentives rather than regulation and emphasizing local implementation.

The Fund's statutes and operation are based on a "bottom-up" rather than a "top-down" approach. The Fund is a public granting program that asks the public to propose local riparian solutions, rather than having the state dictate specific measures, priorities or areas of concern.

The Grant Application Process

The Commission accepts grant applications annually. Applications are made available for public review and comment during the 45 days after the application deadline. Commission staff conducts a technical review of the projects and ranks them according to a system created by the Commission. A brief summary of the technical review is provided to the Commissioners and the applicant. Applicants are then given an opportunity to make an oral presentation to the Commission about their project.

1998 Public Input Process

By statute, public evaluation and guidance is required every three years to provide the foundation for the next three years of grant applications. The Commission undertook such an evaluation from March through May 1998.

First, one-on-one interviews were conducted with 35 stakeholders representing a wide variety of interests to identify key issues. Next, four invitational focus group meetings were conducted in different parts of the state to discuss these key issues in more detail. Results were summarized in a newsletter format and mailed to citizens and organizations around the state.

The Commission solicited input on four primary issues. A brief summary of the Commission's response to public input follows each issue.

Issue 1: Grant Application Manual

Response: Staff revised the applications manual and procedures using information from the interviews and focus groups. Four public workshops were held around the state to discuss the proposed changes.

Issue 2: Delineation of geographic areas where river and riparian restoration will be emphasized

Response: Perennial and intermittent streams were chosen as the geographic areas of concern where river and riparian restoration will be emphasized. During the next three years, the Commission will evaluate the availability of or development of a method(s) to further prioritize river and riparian restoration.

Issue 3: Identification of issues of concern

Response: The two individual issues identified most frequently were development and grazing. Points will be awarded in the rating process if proposals address one or more of the key issues of concern.

Issue 4: Types of measures needed to address those issues

Response: The tools most frequently mentioned were the establishment of institutional partnerships and public education. Other measures frequently mentioned were: use of water rights; wastewater or CAP water for riparian or wetland habitats; groundwater recharge; grazing management; watershed management; and protective zoning. Points will be awarded in the rating process if proposals address one or more of these measures.

Other issues addressed during this process include:

commission policies; application forms and process; contracts and contract administration; grant selection process; long-term monitoring; and information transfer.

Response: The Commission is committed to maintaining a high degree of accountability for this program and for the funds allotted to this program. Grant administration must remain consistent with the fiscal principles of good State contract management. Providing the support to ensure successful projects is also a priority for this Commission. Within that context, the Commission and its staff have implemented a number of administrative changes to increase flexibility and responsiveness in program administration and will continue to explore new ways to improve in this area.

During this presentation, the applicant may address any issues, omissions or misinterpretations of information raised during the review process. Commissioners take all this information into consideration but use their own additional criteria and judgment to select projects. Voting occurs approximately four months after the application deadline. Projects are funded upon receiving a majority vote of the Commission members present at the time of voting.

Grants are implemented through contracting with the grantees. Grants can extend generally over a three year period. Funds are paid out over the term of the contract as activities are accomplished.

Accomplishments

In fiscal year 1998, the Commission funded 19 of the 35 grant applications received, for a total of \$2.5 million. This was the third grant cycle. The Commission has awarded a total of 72 grants over the past three years, totaling close to \$15 million and ranging in amounts from \$7,390 to \$2,562,000. Of the grants awarded, some were unable to be brought to contract.

Grants have been awarded in every county of the State. The Commission has funded a wide range of projects including channel restoration, riparian revegetation, wetland restoration, wetland creation, watershed management plans, applied research, fencing and grazing improvements, and erosion control projects.

Even though some available funds were not awarded last year, the Commission believes it is more due to the youth of the program rather than a lack of good projects to be accomplished in the State. The Commission expects that the number and requested funding for good projects will continue to grow. The Commission has received notification that a number of applications for large-scale projects are being prepared for the 1999 funding cycle. These are complex projects that take several years to plan and coordinate. Funding requests for these projects are expected to be large.

188	97-045	Santa Cruz Headwaters Project	\$100,445

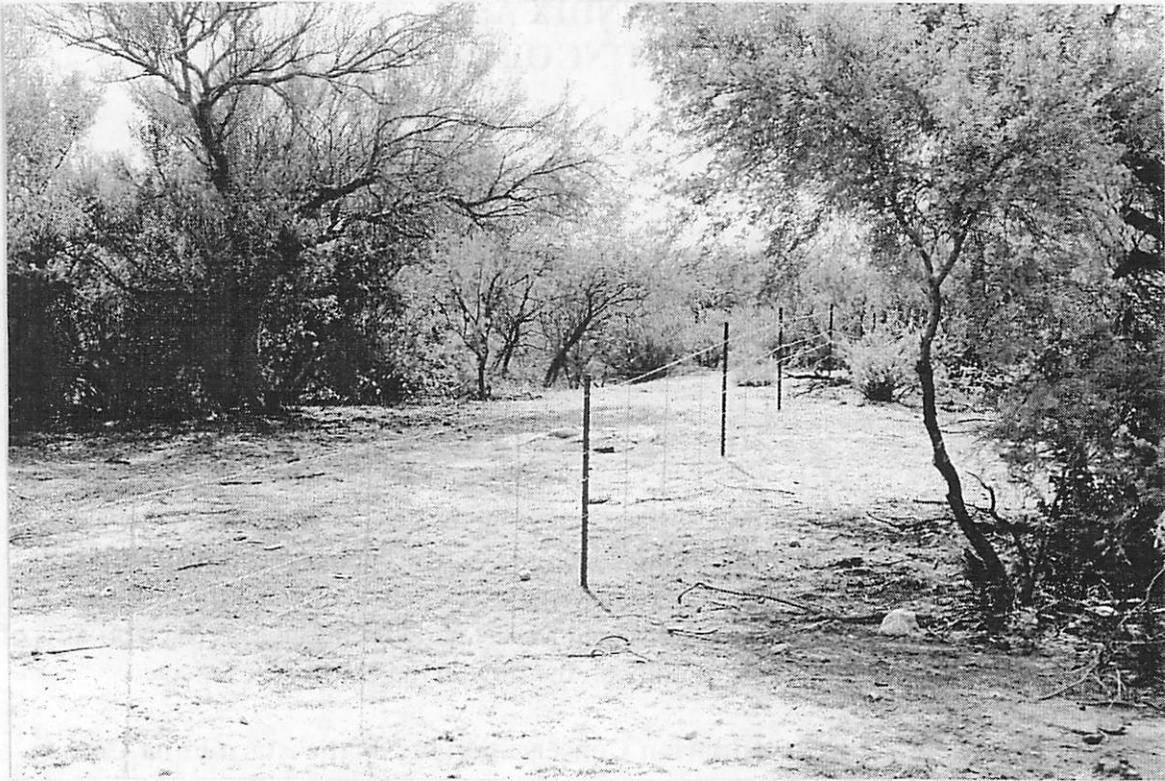

Figure 2. Fencing constructed at the Sycamore Creek management area to prevent uncontrolled livestock grazing and off-road vehicle damage. 95-003WPF.

95-004WPF: Road Reclamation to Improve Riparian Habitat along the Hassayampa and Verde Rivers

Map #: 10

Grantee: Prescott National Forest

County: Yavapai

AWPF Funding: \$45,693

Completion Date: March 1999

Project Description: This three year project will result in closure and revegetation of 19.7 miles of roads adjacent to the Hassayampa and Verde Rivers within the Prescott National Forest. The goal of the project is to reduce erosion and sedimentation into the rivers, restore riparian and upland vegetation on the closed and reclaimed road surfaces, and eliminate unauthorized roads.

95-005WPF: Preservation of the San Pedro River Utilizing Effluent Recharge

Map #: 32

Grantee: City of Sierra Vista

County: Cochise

AWPF Funding: \$2,562,000

Completion Date: September 1999

Project Description: This project is a partnership between the City of Sierra Vista, the Arizona Water Protection Fund and the U.S. Bureau of Reclamation. The City intends to build a constructed wetland and recharge facility as part of the expansion of their wastewater treatment facility. The wetland will be used to improve the effluent water quality so it can be recharged

back into the aquifer. By recharging effluent, the City hopes to minimize any adverse effects on the flow of the San Pedro River from groundwater pumping.

95-006WPF: Riparian Habitat Restoration along a Perennial Reach of a Verde River Tributary

Map #: 28
Grantee: Northern Arizona University County: Coconino
AWPF Funding: \$102,535 Completion Date: March 1999

Project Description: The primary purpose of this three-year project is to restore habitat critical to the successful regeneration of a Bebb willow-mixed graminoid riparian plant community in the area of Hart Prairie located northwest of Flagstaff on a tributary to Sycamore Creek. The

project involves removing an existing surface water diversion, restoring the natural drainage channel, fencing critical areas, and monitoring vegetation response to hydrologic changes.

95-007WPF: High Plains Effluent Recharge Project

Map #: 26
Grantee: Pima County
Flood Control District
County: Pima
AWPF Funding: \$189,000
Completion Date: June 2000

Project Description: This project intends to integrate riparian protection and enhancement with operation of a groundwater recharge facility utilizing Central Arizona Project water. The project is located along the effluent-dominated riparian corridor of the Santa Cruz River in the northwest portion of the Tucson Active Management Area and is the first component of a much larger project that will stretch for several miles within the floodplain of the Santa Cruz

River. Pima County Flood Control District is conducting this project in conjunction with several federal, state and local agencies.

95-008WPF: Picacho Reservoir Riparian Enhancement Project
Map #: 12
Grantee: Pinal County Department of Civil Works County: Pinal
AWPF Funding: \$2,400,000 Completion Date: 2016

Project Description: This project will enable Pinal County to purchase sufficient quantities of CAP water over a 15-20 year period to protect and enhance the 2,400-acre riparian and wetland habitat that currently exists within the Picacho Reservoir. The habitat is periodically threatened by lack of water or dry-out from irrigation drawdown and drought. Under this grant, Pinal County was able to establish a minimum pool within the reservoir to provide long-term, sustainable protection and enhancement of wildlife and aquatic resources.

**95-009WPF:
Regeneration and
Survivorship of Arizona
Sycamore**
Map #: 15
Grantee: Arizona State
University
County: Maricopa
AWPF Funding: \$34,617
Completed: December 1998

Project Description: The goal of this research project was to gather information on the general characteristics of the Arizona sycamore tree to help determine where and under what conditions the sycamore grows best. The project involved collection of field data along several perennial, intermittent, and ephemeral streams in southern and central Arizona, with the primary goal of increasing the understanding of factors that influence regeneration and survivorship of Arizona sycamore. Factors related to water availability and land use were evaluated in the study.

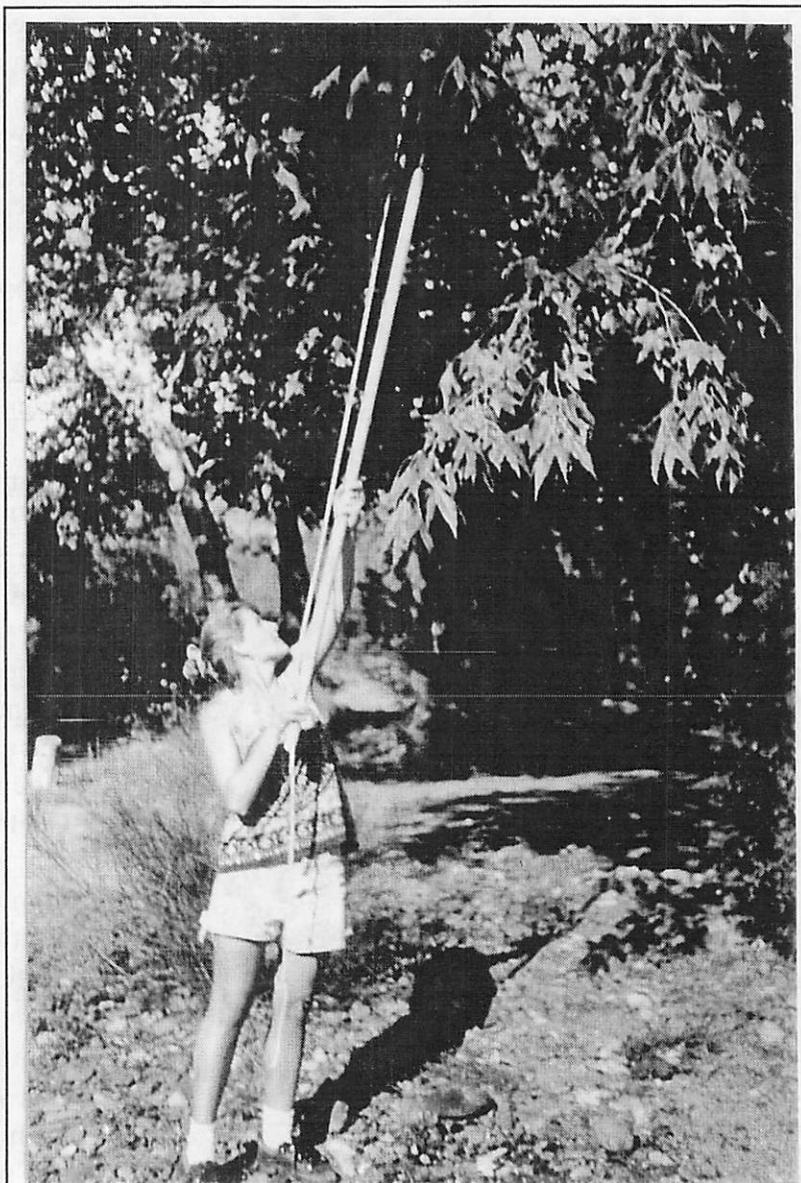

Figure 4. Collecting samples from an Arizona Sycamore.
95-009WPF.

95-010WPF: Assessment of the Role of Effluent Dominated Rivers in Supporting Riparian Functions

Map #: 16

Grantee: Arizona State University

County: Maricopa

AWPF Funding: \$46,750

Completed: December 1997

Project Description: Researchers studied sites along six reaches of three Arizona streams (two reaches per stream), where both an effluent dominated section and a natural perennial section existed. The study concentrated on one of the selected streams and compared some of the functions of the riparian ecosystem along the effluent-dominated and non-effluent dominated reaches. The objective was to determine whether there were differences in ecosystem responses between effluent-dominated reaches and non-effluent dominated reaches.

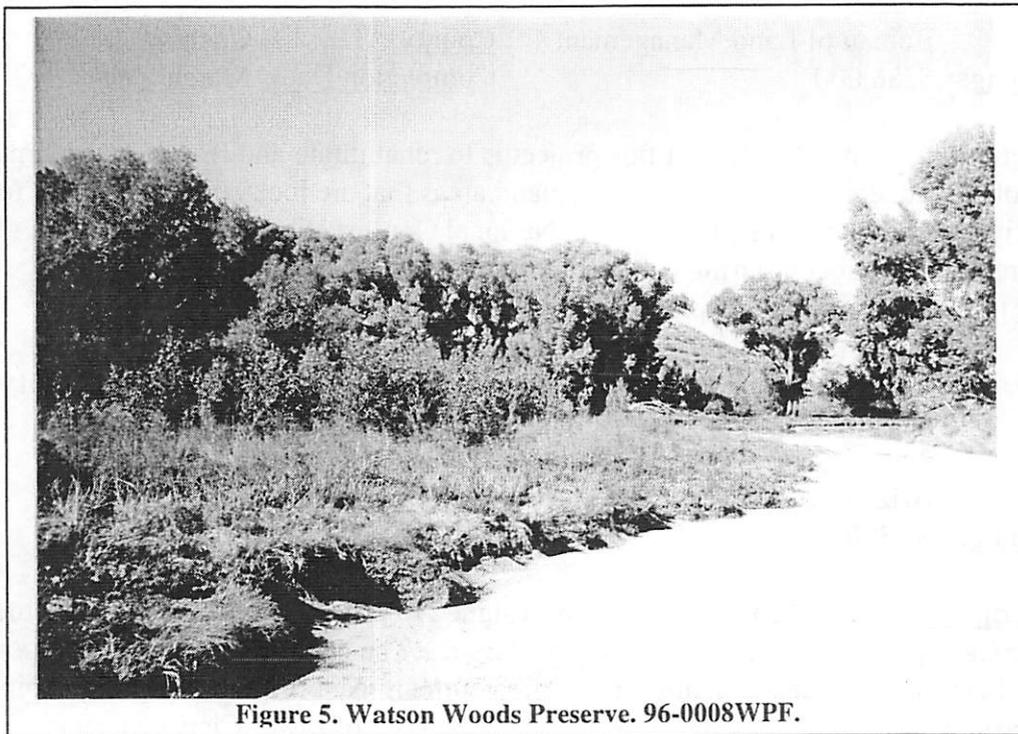

Figure 5. Watson Woods Preserve. 96-0008WPF.

95-012WPF: The Comprehensive Plan for the Watson Woods Riparian Preserve

Map #: 19

Grantee: Prescott Creeks Preservation Association

County: Yavapai

AWPF Funding: \$33,267

Completed: December 1996

Project Description: This project was designed to produce a comprehensive plan to manage Watson Woods, a 125 acre riparian gallery forest located along Granite Creek in Prescott, Arizona. The comprehensive plan addressed management, restoration, monitoring, and environmental education program plans.

95-014WPF: Gila Box Riparian and Water Quality Improvement Project
Map #: 36
Grantee: Bureau of Land Management County: Graham & Greenlee
AWPF Funding: \$157,223 Completion Date: July 1999

Project Description: This project will improve and enhance the riparian habitat and water quality of the Gila Box Riparian National Conservation Area (RNCA) on the upper Gila River by moving livestock grazing from the river to the adjacent upland areas. Approximately six miles of fencing will be constructed, water lines, stock tanks and water pumps will be installed to provide water to the upland areas.

95-015WPF: San Pedro Riparian National Conservation Area Watershed Rehabilitation/Restoration Project
Map #: 37
Grantee: Bureau of Land Management County: Cochise
AWPF Funding: \$286,000 Completion Date: March 1999

Project Description: The objective of this project is to rehabilitate and restore approximately 4,450 acres of eroded, ephemeral washes and upland areas that are located 0.5 to 1 mile from the San Pedro River within the San Pedro Riparian National Conservation Area (SPRNCA). This will be accomplished by recontouring ephemeral washes and adjacent uplands and by revegetating these areas with native plant species.

95-016WPF: Refinement of Geologic Model, Lower Cienega Basin, Pima County, Arizona
Map #: 38
Grantee: Arizona Geological Survey County: Pima
AWPF Funding: \$7,390 Completed: September 1996

Project Description: This research project was designed to produce a refined geologic model for the lower Cienega Basin, located southeast of Tucson. The geologic model is an important component of computer models that are used to predict the impact of groundwater pumping within the basin on perennial and intermittent flowing reaches of lower Cienega Creek.

95-017WPF: Restoration of Fossil Creek Riparian Ecosystem
Map #: 49
Grantee: Rocky Mountain Forest and Range Experimental Station County: Gila
AWPF Funding: \$59,693 Completion Date: June 1999

Project Description: This study will determine the potential effects that re-establishment of part or all of the presently diverted flows of Fossil Creek could have on re-establishment of riparian vegetation along the stream's corridor. A major component of this project is to compare and contrast historical vegetation with present vegetation to determine the consequences of adding additional water into the creek. The stream has been de-watered for approximately 80 years by

diversions for hydroelectric use, but may receive some or all of this water within the next few years due to the relicensing process for the hydroelectric power plant.

95-018WPF: Autecology & Restoration of *Sporobolus wrightii* Riparian Grasslands in Southern Arizona

Map #: 54

Grantee: Arizona State University

County: Cochise, Santa Cruz, Pima

AWPF Funding: \$53,743

Completion Date: July 1999

Project Description: This study will acquire ecological information necessary to understand the natural processes allowing for regeneration and maintenance of *Sporobolus wrightii* (giant sacaton) riparian grasslands along rivers in southern Arizona. This information will be used to determine the natural recovery and restoration potential of this type of community on abandoned agricultural fields located along these alluvial river systems.

95-019WPF: Quantifying Anti-Erosion Traits of Streambank Graminoids

Map #: 55

Grantee: Arizona State University

County: Pima

AWPF Funding: \$14,910

Completed: December 1997

Project Description: This study measured and compared physical traits of streamside grasses and grass-like plants (graminoids) to determine their potential capacity to stabilize streambanks. The study sites were located on Cienega Creek in Pima County. The study looked at grasses and graminoids in terms of their erosion-prevention effectiveness for stream restoration and bank stabilization projects.

95-020WPF: Teran Watershed Enhancement

Map #: 61

Grantee: Redington Natural Resource Conservation District

County: Cochise

AWPF Funding: \$151,753

Completion Date: January 1999

Project Description: The purpose of this

project is to improve watershed conditions within the Teran Watershed, located along the San Pedro River. Thousands of small, loose-rock dam structures have been constructed in an attempt

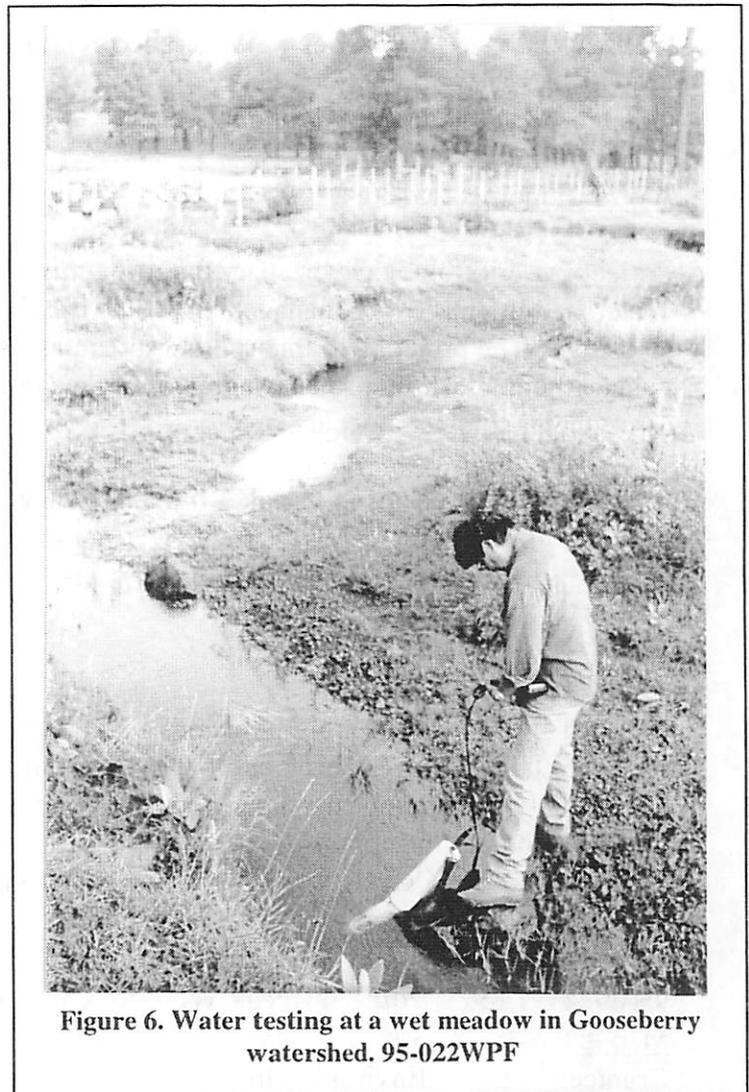

Figure 6. Water testing at a wet meadow in Gooseberry watershed. 95-022WPF

to reduce surface water runoff rates, increase duration of channel flow, improve groundwater recharge and enhance riparian habitat for wildlife.

95-021WPF: Lofer Cienega Restoration Project

Map #: 65
Grantee: White Mountain Apache Tribe County: Apache
AWPF Funding: \$161,204 Completion Date: February 1999

Project Description: This project incorporates stream assessments, long-term monitoring, fence construction, grazing management, biological assessments, and feral horse trapping and removal in an attempt to restore Lofer Cienega. Lofer Cienega is one of the largest cienegas on the Fort Apache Indian Reservation and when restored, should provide critical wildlife and fish habitat. In addition it is a significant cultural resource to the tribe.

95-022WPF: Gooseberry Watershed Restoration Project

Map #: 66
Grantee: White Mountain Apache Tribe County: Apache
AWPF Funding: \$126,406 Completion Date: May 1999

Project Description: The primary purpose of this project is to restore the health of Gooseberry Watershed by improving management of the riparian meadows and reconstructing stream crossings. The project will incorporate stream assessments, improved riparian grazing management, clean-up projects and public education, channel restoration and biologic assessments to meet its goals.

95-0023WPF: Sabino Creek Riparian Ecosystem Protection Project

Map #: 69
Grantee: Hidden Valley Homeowners Association County: Pima
AWPF Funding: \$16,385 Completed: April 1998

Project Description: Through this project, the Hidden Valley Homeowners Association acquired the necessary equipment to record streamflow measurements and to write a report which analyzes and presents data in a format that can be submitted to the Arizona Department of Water Resources in support of an application for non-consumptive, instream flow water right for a reach of Sabino Creek. The project area is a privately owned natural riparian park owned by the Hidden Valley Homeowner's Association in Tucson.

95-0024WPF: Potrero Creek Wetland Characterization and Management Plan

Map #: 80
Grantee: EnviroNet, Inc. County: Santa Cruz
AWPF Funding: \$75,300 Completed: May 1997

Project Description: This wetland/riparian area is located adjacent to Nogales. The purpose of this one-year project was to determine the source of water that sustains the wetland/riparian area, and to determine factors critical to its continuation as a wetland area. The grantee also evaluated the area's potential for habitat improvement or habitat replication. The project included both a biologic and hydrogeologic evaluation of the site as well as development of a wetland management plan.

AWARDED DURING FY '97

96-0001WPF: San Pedro Riparian National Conservation Area Watershed Protection and Improvement Project

Map #: 140
Grantee: Bureau of Land Management County: Cochise
AWPF Funding: \$89,250 Completed: September 1998

Project Description: The project's purpose is to improve, enhance and protect the riparian habitats and water quality in the San Pedro National Riparian Conservation Area. Part of the funds were spent on installation of 12 miles of fencing to eliminate livestock trespass on 36 miles of the San Pedro River. This project will enhance the riparian ecosystem and associated wildlife habitats without undue impacts to upland grazing allotments.

96-0002WPF: Completion Phase: Hi-Point Well Project

Map #: 130
Grantee: Navajo County Natural Resource Conservation District County: Coconino
AWPF Funding: \$77,844 Completion Date: April 1999

Project Description: The grantee will develop 24 water troughs and 3.5 miles of cross fencing to more evenly distribute grazing by livestock and ungulates. The objective is to improve vegetative cover, thereby reducing erosion and sediment deposition in both Chevelon Creek and Clear Creek, perennial tributaries to the Little Colorado River.

96-0003WPF: Hoxworth Springs Riparian Restoration Project

Map #: 96
Grantee: Northern Arizona University County: Coconino
AWPF Funding: \$31,545 Completion Date: February 1999

Project Description: Scientists at NAU are working with the Coronado National Forest to restore the historic stream channel to a portion of a perennial stream that flows from Hoxworth Springs. The stream has experienced downcutting and a significant loss of riparian vegetation due to channelization and intense grazing from livestock and elk. Channel stabilization will be accomplished using earth moving equipment and revegetation. Elk exclosures will be constructed to reduce grazing pressure during restoration efforts.

96-0004WPF: Hydrologic Investigation and Conservation Planning: Pipe Springs, AZ
Map #: 83
Grantee: National Park Service, Pipe Springs National Monument
County: Mohave
AWPF Funding: \$50,000
Completed: November 1998

Project Description: This project included a detailed chemical analysis of water from Pipe Springs and from springs and wells in the surrounding area. The objective was to determine the cause(s) of decreased spring flow. A conceptual model will be developed of the groundwater flow system feeding the springs.

**Figure 7. Spring at Pipe Springs National Monument.
96-0004WPF.**

The project will provide a better understanding of the groundwater hydrology of the aquifer associated with the springs and wells in the immediate vicinity, providing information for wise water use planning for all area users.

96-0005WPF: Tres-Rios River Management and Constructed Wetlands Project

Map #: 101
Grantee: City of Phoenix
County: Maricopa
AWPF Funding: \$1,000,000
Completion Date: May 2000

Project Description: This grant will fund part of the costs associated with preparing an environmental impact statement for the Tres-Rios wetlands. The Tres-Rios project will provide a continuous and constant source of water in the Salt River that will maintain riparian vegetative communities and associated wildlife habitat.

96-0006WPF: Hydrogeologic Investigation of Groundwater Movement and Sources of Base Flow to Sonoita Creek and Implementation of Long-Term Monitoring Program

Map #: 120
Grantee: The Nature Conservancy
County: Santa Cruz
AWPF Funding: \$155,715
Completion Date: August 1999

Project Description: This project will obtain hydrogeologic data from new groundwater monitoring wells and will assist in determining sources of groundwater discharge that sustain base flow in the perennial reach of Sonoita Creek upstream from Lake Patagonia in Santa Cruz County.

96-0007WPF: Ash Creek Riparian Protection Project

Map #: 99

Grantee: Mingus Springs Camp; County: Yavapai
Henry Dahlberg Foundation

AWPF Funding: \$19,248 Completion Date: October 1999

Project Description: The Ash Creek project is a joint effort between the Mingus Springs Camp and the U.S. Forest Service to restore the riparian habitat fed by several springs. The project will improve turkey habitat and extend the riparian area by increasing water retention through the construction of gabions and log dams.

96-0008WPF: Watson Woods Vegetation Inventory

Map #: 118

Grantee: Prescott Creeks Preservation County: Yavapai
Association

AWPF Funding: \$16,115 Completed: April 1998

Project Description: The Watson Woods Vegetation Inventory will characterize the vegetative communities within the Watson Woods Riparian Preserve in order to describe baseline conditions at the site. This information will guide management and restoration efforts at the preserve.

Figure 8. Erosion control structure at Mingus Springs Camp. 96-0007WPF.

96-0009WPF: Watson Woods Riparian Preserve Visitor Management

Map #: 119
Grantee: Prescott Creeks Preservation Association County: Yavapai
AWPF Funding: \$8,557 Completed: August 1997

Project Description: The Watson Woods Riparian Preserve has an on-going need to manage visitor activities including control of access, maintenance of infrastructure, public outreach and educational information. This grant will allow preserve managers to develop a plan that will facilitate a better quality visitor experience and will protect the park itself from degradation due to inappropriate use.

96-0010WPF: Rehabilitating the Puertocito Wash on the Buenos Aires National Wildlife Refuge

Map #: 90
Grantee: Arizona Conservation Voters Habitat Fund County: Pima
AWPF Funding: \$83,432 Completion Date: November 1999

Project Description: This project will rehabilitate Puertocito Wash, an eroded ephemeral stream, through the construction of two gabions along the stream course and the re-establishment of native grasses. A resource monitoring program will be designed and implemented and a watershed demonstration area will be established for local ranchers and other members of the public.

96-0011WPF: Lower Colorado River - Imperial Division Restoration

Map #: 109
Grantee: Bureau of Reclamation County: Yuma
AWPF Funding: \$583,276 Completion Date: July 2001

Project Description: This project will restore streamflow to small backwater channels and about 50 acres of dried-out wetlands along the lower Colorado River. Areas will be revegetated with native riparian plant species. The grantee hopes to create higher quality riparian and aquatic habitat along this reach of the river.

96-0012WPF: Eagle Creek Watershed and Riparian Stabilization

Map #: 100
Grantee: James F. Holdar County: Greenlee
AWPF Funding: \$80,626 Completion Date: December 1999

Project Description: This project will improve the watershed, upland range and riparian community of Eagle Creek through the installation of fencing, grazing management, and the expansion of an existing pipeline to distribute water sources throughout the upland area.

96-0013WPF: Happy Valley Riparian Area Restoration Project

Map #: 124
Grantee: Coronado National Forest County: Pima
AWPF Funding: \$64,697 Completion Date: March 1999

Project Description: The Paige Creek riparian area is a unique, large riparian gallery located on the east side of the Rincon Mountains. The grantee will fence the riparian area, create upland water sources for ungulates, construct an instream structure to reduce water velocity and construct a pipe barrier fence to restrict vehicle access to sensitive areas.

96-0014WPF: Klondyke Tailings Response Strategy Analysis

Map #: 113
Grantee: Arizona Department of Environmental Quality County: Graham
AWPF Funding: \$90,000 Completed: August 1998

Project Description: In this project, a team of scientists led by Arizona Department of Environmental Quality collected data to determine the extent of impact on Aravaipa Creek from runoff or leaching of contaminated mine tailings at the Klondyke tailings pile. The team developed a response strategy to determine the best methods of treating the tailings pile to reduce or prevent groundwater and stream contamination by leaching, runoff or erosion of the tailings into the stream.

96-0015WPF: Abandonment of an Artesian Geothermal Well

Map #: 127
Grantee: Smithville Canal Company County: Graham
AWPF Funding: \$113,360 Completion Date: December 1999

Project Description: The grantee has capped a deep, artesian geothermal well, near the Gila River, north of Thatcher Arizona. Discharge from the well was highly saline and was degrading soils and plants in the vicinity and, possibly, degrading downstream water quality in the Gila River. The grantee is now monitoring the site to evaluate changes due to well abandonment.

96-0016WPF: The 'Ahakhav Tribal Preserve

Map #: 92
Grantee: Colorado River Indian Tribes County: La Paz
AWPF Funding: \$931,477 Completion Date: April 2000

Project Description: The Colorado River Indian Tribes will re-establish riparian and wetland habitat in a 110 acre area of the 'Ahakhav Tribal Preserve. The grantee will re-establish fish and wildlife riparian and wetland habitat by dredging some historic backwater river channels, revegetating native riparian vegetation and establishing a monitoring program to ensure successful restoration of the riparian habitat along the Colorado River.

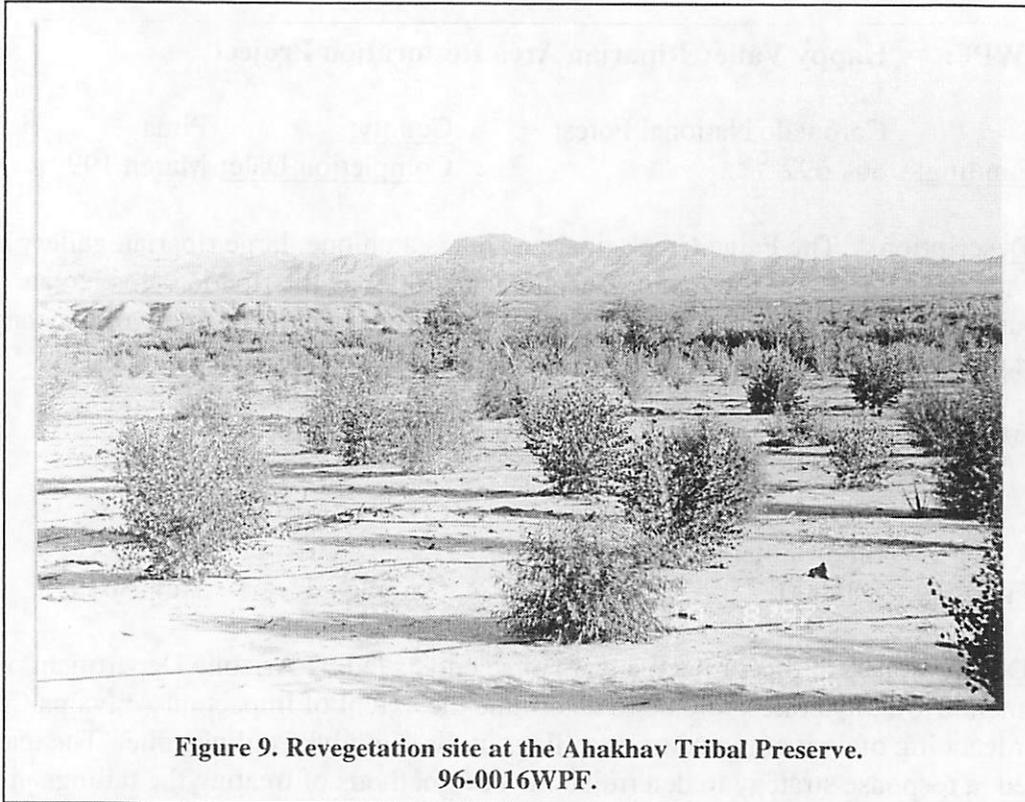

Figure 9. Revegetation site at the Ahakhav Tribal Preserve.
96-0016WPF.

96-0017WPF: Big Sandy River Riparian Project

Map #: 93

Grantee: Bureau of Land Management

County: Mohave

AWPF Funding: \$92,000

Completion Date: January 2000

Project Description: This project will help to restore an approximately 8 mile perennial reach along the Big Sandy River south of the Kingman Resource Area near Alamo Lake. Under this grant, pasture fencing will be constructed to help control livestock. Additionally, the development of upland livestock water sources will facilitate the management of livestock grazing outside of the riparian area.

96-0018WPF: San Carlos Spring Protection Project

Map #: 122

Grantee: San Carlos Apache Tribe

County: Graham

AWPF Funding: \$131,540

Completion Date: Cancelled at request of grantee.

Project Description: Prior to cancellation, the grantee fenced 8 springs on the San Carlos Apache Reservation to protect them from grazing and trampling by livestock. Pipelines and water troughs were installed to provide water to the livestock away from the spring sites.

96-0019WPF: Response of Bebb Willow to Riparian Restoration

Map #: 94
Grantee: Northern Arizona University
County: Coconino
AWPF Funding: \$33,752
Completion Date: May 1999

Project Description: The grantee will restore water flow through a decadent Bebb willow ecosystem, and then quantify and compare the response of the plant community to the water flow. The project is intended to improve understanding of the structure, function and dynamics of a watershed and its associated terrestrial and riparian ecosystems.

96-0020WPF: Cienega Creek Stream Restoration

Map #: 135
Grantee: Bureau of Land Management
County: Pima
AWPF Funding: \$210,700
Completion Date: October 1999

Project Description: The grantee will remove an agricultural diversion canal that is no longer used, and re-establish flow through the Cienega Creek channel. Volunteers from Sonoita and Tucson will collect and maintain plant material salvaged from the project site and will revegetate areas disturbed during project activities.

96-0021WPF: Riparian Vegetation and Stream Channel Changes Associated with Water Management along the Bill Williams River

Map #: 151
Grantee: Arizona State University
AWPF Funding: \$14,788
County: Mohave
Completed: November 1998

Project Description: The project produced quantitative data on the relationship between streamflow and historic changes in the riparian community and channel morphology along Bill Williams River below Alamo Dam. This information will be used in an ongoing effort to define reservoir operation regimes that will ensure protection of the riparian habitat downstream of Alamo Dam.

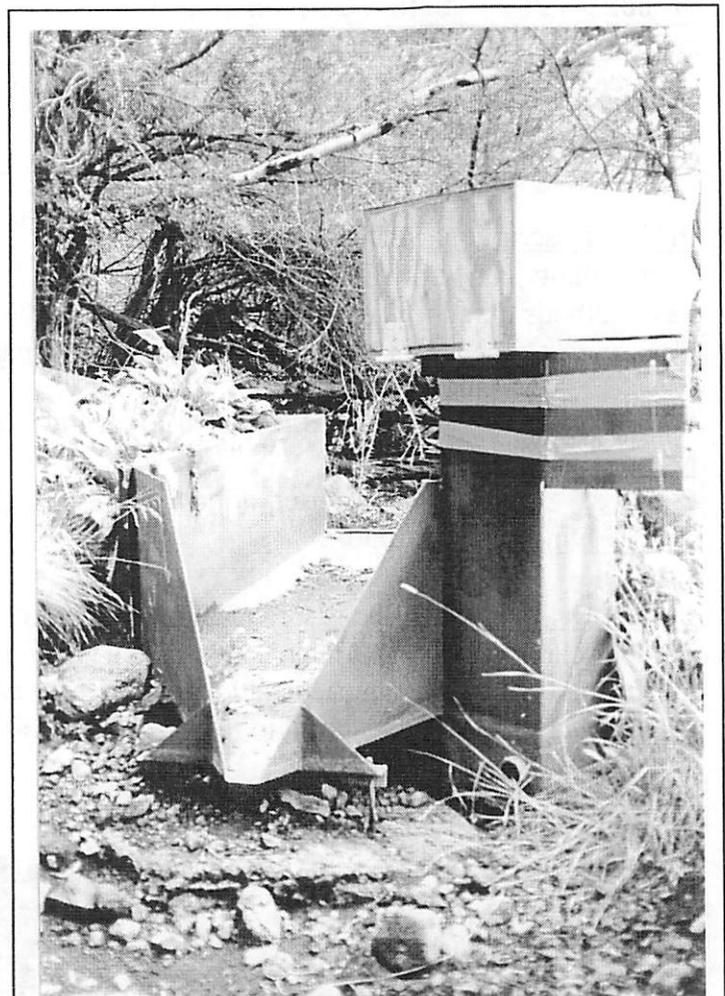

Figure 10. Flume installed to measure stream flow at Hart Prairie. 95-005WPF.

96-0022WPF: Saffell Canyon and Murray Basin Watershed Restoration Project

Map #: 103

Grantee: Apache Sitgreaves National Forest County: Apache

AWPF Funding: \$24,316 Completion Date: October 1998

Project Description: The objectives of this project are to restore watershed health and improve water quality in Murray Basin and Saffell Canyon. The grantee is attempting to determine the best methods to reduce and reverse soil erosion in the watershed. The Murray Basin and Saffell Canyon watershed have been severely damaged by past management practices.

96-0023WPF: Watershed Restoration at the Yuma Conservation Gardens

Map #: 115

Grantee: Yuma Conservation Garden County: Yuma

AWPF Funding: \$31,050 Completion Date: March 1999

Project Description: The grantee will renovate a five acre model watershed that is used as an outdoor classroom at the Yuma Conservation Garden (YCG). The YCG is a 28 acre natural area established in the 1950's for education and recreational purposes. The project area was established in 1962, and is used to teach the public about watershed issues in the Yuma area.

Figure 11. Site of potential road failure due to bank erosion, Canyon del Muerto. 96-0025WPF.

96-0025WPF: Tsaile Creek Watershed Restoration Demonstration

Map #: 108
Grantee: The Navajo Nation
County: Apache
AWPF Funding: \$152,775
Completion Date: July 2000

Project Description: The grantee will develop six watershed restoration projects with concurrent workshops to demonstrate riparian restoration concepts to local residents, tribal employees and resource conservation professionals. The projects will focus on biological restoration approaches. The grantee will use these projects to build community support for broader watershed restoration efforts.

96-0026WPF: Riparian Restoration on the San Xavier Indian Reservation Community

Map #: 133
Grantee: San Xavier Indian Reservation
County: Pima
AWPF Funding: \$591,319
Completion Date: May 1999

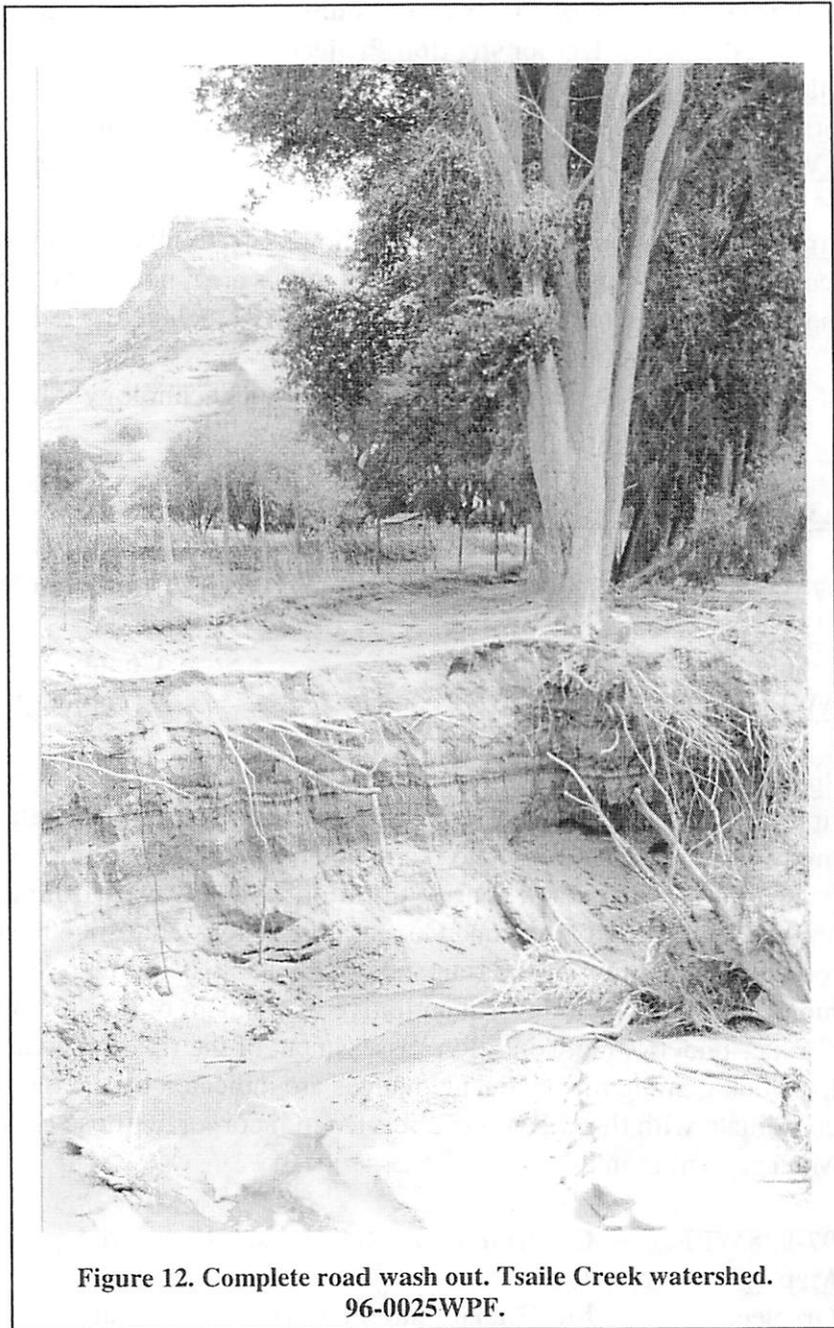

Figure 12. Complete road wash out. Tsaile Creek watershed. 96-0025WPF.

Project Description: The San Xavier District of the Tohono O’odham Tribe will evaluate various options for riparian restoration on their lands. The community will have an opportunity to be involved in the planning and decision process. Sites for riparian restoration will be chosen based on physical/biological conditions and community preference. A restoration plan will be developed and implemented.

96-0027WPF: Nogales International Wastewater Treatment Plant Constructed Wetland Demonstration Project

Map #: 97
Grantee: City of Nogales, Arizona County: Santa Cruz
AWPF Funding: \$352,420 Completion Date: Contract cancelled at request of grantee.

Project Description: This demonstration project will determine the appropriateness of a full scale wetland for wastewater treatment in this area, possibly coupled with a recharge project for the upper Santa Cruz River. Overall objectives include the reduction of ammonia in the current effluent discharge, habitat development, riparian system protection and enhancement, protection of Nogales' Santa Cruz River water supply and technology transfer to Mexico.

AWARDED DURING FY '98

97-027WPF Lyle Canyon Allotment Area Restoration Project

Map #: 153
Grantee: Byrd Lyndsey County: Cochise, Santa Cruz
AWPF Funding: \$55,476.33 Completion Date: October 2001

Project Description: The purpose of the Lyle Canyon project is to restore and protect the riparian areas on the Lyle Canyon Allotment through the installation of a variety of range improvements, including fences and upland water developments that will better distribute cattle grazing in the upland portions of the allotment, and away from the riparian areas. The Grantee and the University of Arizona Cooperative Extension Office have developed a monitoring plan to record the condition of riparian and upland habitats on the Lyle Canyon Allotment. The monitoring plan includes a quantitative assessment of the riparian and upland vegetation, a "Proper Functioning Condition" assessment of the riparian areas, and photo point monitoring. If livestock grazing management changes are indicated by the monitoring data the grantee will coordinate with the U.S. Forest Service to incorporate those changes into the Allotment Management Plan.

97-028WPF: Creation of a "Reference" Riparian Area in the Gila Valley

Map #: 155
Grantee: Mt. Graham International County: Graham
Science & Culture Foundation
AWPF Funding: \$182,000 Completion Date: May 2000

Project Description: The purpose of this project is to create a riparian system in a highly visible area along a tributary to the environmentally significant Gila River. Information from the creation of this area in the Gila Valley will provide on-site riparian benefits to wildlife and the watershed. The project has a significant outreach and educational component that will explain the benefits of establishing riparian areas. The grantee will also provide information on techniques used to land management agencies and to the public.

97-029WPF: Demonstration Enhancement of Pueblo Colorado Wash at Hubbell Trading Post

Map #: 159
Grantee: National Park Service, County: Apache
Hubbell Trading Post National Historic Site
AWPF Funding: \$91,110 Completion Date: May 2001

Project Description: The Hubbell Trading Post National Historic Site proposes to re-establish, enhance and conserve one-half mile of the Pueblo Colorado Wash within the boundaries of the Historic Site. The stream channel will be restored using low-tech instream structures to restore meanders and pools. The objective for installing these structures is to slow stream flows so that sediment will be deposited in point bars that will eventually support riparian vegetation. Invasive plant species will be removed from the riparian area. The stream channel and riparian areas will be revegetated with appropriate native species such as native reed, willows and cottonwoods. Restoration efforts, water quality, and water quantity will be evaluated to determine changes that result from project activities. Hydro-meteorological monitoring will also be conducted to establish hydrological baseline data for the wash.

97-030WPF: Walnut Creek Center for Education and Research - Biological Inventory

Map #: 160
Grantee: Yavapai College County: Yavapai
AWPF Funding: \$50,580 Completion Date: May 2001

Project Description: The Walnut Center for Education and Research is located approximately 35 miles northwest of Prescott in the Williamson Valley. The site is being leased from the Prescott National Forest under a special use permit. The Walnut Creek Center for Education and Research is a partnership comprised of staff from NAU, Prescott College, Sharlot Hall Museum and Yavapai College. The purpose of the project is to conduct a two-year inventory of the 280 acre site. Specifically, inventories of vegetation, birds, mammals and reptiles will be conducted and physical components of stream geomorphology, topography and soils will be evaluated. Upon completion, these data will be used to establish a baseline condition for the site's physical and biological resources as a precursor to the development of a long-term management and operational plan for the Center site.

97-031WPF: Atturbury Wash Project

Map #: 161
Grantee: City of Tucson Water Dept. County: Pima
AWPF Funding: \$154,580 Completion Date: April 2000

Project Description: The City of Tucson's Atturbury Wash Project will establish a sustainable riparian habitat, approximately five acres in size along a one-half mile long tributary of the Atturbury Wash within Lincoln Regional Park. The water source for the project is secondary effluent produced at the City's Roger Road Reclaimed Wastewater Treatment Plant. The project has three major objectives: 1) creation of interconnected wetlands and shallow ponds that will support planted emergent vegetation and will create habitat for wildlife; 2) provide information

on the capacity of small scale wetlands to reduce nitrogen levels in reclaimed wastewater; and, 3) provide water quality data down-gradient of the wetlands.

97-032WPF: 'Ahakhav Tribal Preserve - Deer Island Revegetation

Map #: 162
Grantee: Colorado River Indian Tribes County: La Paz
AWPF Funding: \$228,800 Completion Date: February 2000

Project Description: The 'Ahakhav Tribal Preserve on the Colorado River Indian Reservation is approximately 1042 acres in size. The construction of dams and channelization of the Colorado River as well as the introduction of the exotic and invasive saltcedar has left the Preserve nearly devoid of cottonwoods and willows. Because saltcedar does not provide adequate cover, food and thermal protection, this habitat type supports a significantly lower diversity of insects, birds and other wildlife. The Grantee will remove low-quality exotic plants near the Deer Island backwater, and revegetate the site with native plants including cottonwood, willow, mesquite, wolfberry and four-wing saltbush.

97-033WPF: Proctor Vegetation Modification

Map #: 163
Grantee: Coronado National Forest County: Pima
AWPF Funding: \$11,487 Completion Date: March 2001

Project Description: This project site is about 200 acres of upland area along Madera Canyon within Pima County. The project goal is to reduce the upland mesquite component of the existing overstory with minimal harm to other tree species and to restore the herbaceous understory to a condition dominated by native perennial grass species. There is currently little perennial grass understory at this site due to shading from the excessive mesquite overstory. Perennial grasses are important to soil stability by reducing soil erosion and the resulting turbidity in streams, allowing beneficial water retention, litter development and organic matter levels within the soils, and improving rainfall percolation into the ground. The project will remove upland mesquite trees with main stem diameters less than 5 inches, temporarily restrict vehicle use in the area for several years, enforce livestock grazing standards and guidelines and refurbish a stockpond to draw cattle away from the treatment and regrowth site.

97-034WPF: Oak Tree Gully Stabilization

Map #: 164
Grantee: Coronado National Forest County: Pima
AWPF Funding: \$42,491 Completion Date: April 2001

Project Description: The advancement of headcuts in the Oak Tree Canyon and Empire Gulch areas appear to be impacting Cienega Creek through erosional activities. Cienega Creek has recently been designated as a Unique Water, under the Clean Water Act and it is believed that headcutting in the tributaries are leading to increased turbidity in the Creek. The headcuts appear to be deteriorating primarily as a result of the presence of the Forest Service road and unauthorized vehicular use throughout the area. The project involves the treatment of 30

headcuts in the Oak Tree Canyon and Empire Gulch areas through reshaping of the gullies and mechanisms designed to decrease flow velocity and energy to reduce head- and side-cutting. Monitoring of the headcuts and erosional activity will be performed throughout the project duration and long-term using photo points, and examining structural integrity and channel morphology.

97-035WPF: Watershed Improvement to Restore Riparian and Aquatic Habitat on the Muleshoe Ranch CMA

Map #: 165
Grantee: The Nature Conservancy County: Cochise
AWPF Funding: \$128,315 Completion Date: May 2001

Project Description: The purpose of this project is to restore riparian and aquatic habitat in four perennial streams on the Muleshoe Ranch Cooperative Management Area (CMA) by restoring watershed vegetation and function. This will be accomplished by restoring fire as a natural process in the watershed using prescribed burns. The grantee proposes to continue grazing rest until vegetation recovery occurs. A comprehensive monitoring program will be maintained for at least ten years, including monitoring of short term effects of prescribed burns. Fencing will be constructed along 1.5 miles within the project area.

97-036WPF: Stable Isotopes As Tracers of Water Quality Constituents in the Upper Gila River

Map #: 166
Grantee: Arizona Geological Survey County: Cochise, Graham, Greenlee
AWPF Funding: \$27,338 Completion Date: July 1999

Project Description: Water quality issues are becoming increasingly important in the upper Gila River drainage area. Decades of water quality measurements have documented the concentrations of total dissolved solids (TDS) in the Gila River and groundwater, but the precise sources (natural and human) of the TDS are not known. This project will identify the sources and conveyance points of dissolved solids entering the upper Gila River through the use of naturally-occurring stable isotopes. The study area encompasses approximately 200 square miles in southeastern Arizona. Based on the results of the study, the Grantee will develop recommendations for mitigation and further studies in the region.

97-037WPF: Talastima (Blue Canyon) Watershed Restoration Project

Map #: 168
Grantee: The Hope Tribe County: Coconino, Navajo
AWPF Funding: \$310,192 Completion Date: May 2001

Project Description: The purpose of this project is to restore the Talastima watershed, almost 8,000 acres containing 19 miles of streams and wetlands on Hopi lands. Restoration measures will include a tamarisk and Russian olive removal demonstration project, revegetation of native riparian species, erosion control using straw bales, completing livestock enclosures with fencing, installation of a monitoring well and seven drive-point wells, and a study of road impacts on

riparian health. Monitoring will be conducted using on-ground data collection combined with remote sensing techniques. Monitoring will be conducted to assess the success of tamarisk and Russian olive removal, the success of revegetating with native wetland and riparian vegetation, the effects of revegetation activities on groundwater levels and quality and surface water flows and quality, and the effects of restoration activities on raptors and neotropical migratory birds in the project area.

97-038WPF: Tres Rios Wetland Heavy Metal Bioavailability Design for Denitrification and Microbial Water Quality

Map #: 171
Grantee: City of Phoenix County: Maricopa
AWPF Funding: \$117,728 Completion Date: September 2000

Project Description: The purpose of this project is to investigate three issues identified during operation of the Tres Rios Wetland Demonstration Project: 1) Are heavy metals in the wetlands bioavailable and are there operational strategies that would mitigate or exacerbate this phenomena 2) What is the contribution of autotrophic bacteria to the overall denitrification efficiency of the wetland and can this information be used to better estimate wetland surface area requirements, and 3) Are bacteria/pathogen concentrations due to wildlife inputs or re-growth, and what is the survivability of pathogens in a constructed wetland. Sampling and analysis of water, sediment, vegetation and fish tissue will be conducted to achieve the project objectives, and the findings of this study will be presented in an interpretative final report.

97-040WPF: Bingham Cienega Riparian Restoration Project

Map #: 175
Grantee: Pima County Flood Control County: Pima
District
AWPF Funding: \$84,679 Completion Date: April 2001

Project Description: The objective of the project is to restore native riparian vegetation to 50 acres of abandoned agricultural fields at Bingham Cienega along the San Pedro River. Planting areas have been delineated based on site hydrology factors such as groundwater gradients. Plant species were selected based on published relationships between riparian plant distribution and depth-to-groundwater. Three planting areas have been delineated and will be planted to restore different riparian community types. In one area, livestock will be used to graze on exotic weeds and enhance propagation of mesquite trees.

97-041WPF: Altar Valley Watershed Resource Assessment

Map #: 178
Grantee: Altar Valley Conservation County: Pima, Santa Cruz
Alliance
AWPF Funding: \$88,730 Completion Date: October 2000

Project Description: The Pima Natural Resource Conservation District, in association with the Altar Valley Conservation Alliance, will conduct an assessment of the Altar Valley natural

resources and identify problems and areas for improvement. The Grantee will research historic conditions, describe existing conditions, conduct detailed vegetation mapping, and produce community outreach materials. The end product will be an action plan for the restoration of the watershed which identifies and prioritizes problem areas needing attention, describes feasible remedies, and identifies the potential financial means to implement the appropriate land treatments, ranch conservation improvements and resource management changes.

97-042WPF Queen Creek Restoration & Management Plan

Map #: 180
Grantee: Town of Superior County: Pinal
AWPF Funding: \$207,595 Completion Date: September 1999

Project Description: A Queen Creek Restoration and Management Plan will be developed for the Queen Creek corridor that extends from the headwaters on Tonto National Forest, through the Town of Superior to the Boyce Thompson Southwestern Arboretum. The plan will address restoration of stream flow and riparian vegetation, and technical studies will be conducted to determine riparian vegetation water needs and channel flood conveyance capacity. A Committee of Stakeholders, including affected landowners and other interested entities, will be established and two public workshops will be conducted.

97-044WPF: San Pedro River Preserve Riparian Habitat Restoration Project

Map #: 185
Grantee: The Nature Conservancy County: Pinal
AWPF Funding: \$336,127 Completion Date: August 2001

Project Description: The intent of this project is to enhance and protect existing riparian forest along three miles of the San Pedro River. The grantee will restore native grassland communities on the near river slopes and terraces, will determine the need for mechanical stabilization measures and implement measures as needed to stabilize river banks and will re-establish native riparian vegetation in areas of defunct aquaculture ponds and agricultural fields on a site encompassing 860 acres. The grantee will also develop and demonstrate new techniques for restoring abandoned agricultural fields to riparian habitat.

97-045WPF: Santa Cruz Headwaters Project

Grantee: San Rafael Cattle Co. County: Santa Cruz
AWPF Funding: \$100,445 Completion Date: Contract not yet executed

Project Description: The purpose of this project is to restore and maintain seven miles of riparian and wetland corridor of the Santa Cruz River headwaters. Fences and water developments will be constructed to control and manage livestock grazing in the riparian corridor.

APPENDIX B.
ARIZONA WATER PROTECTION FUND
Combined Statement of Receipts, Expenditures and Fund Balance
From Inception July 1, 1994 Through June 30, 1998
(000's Omitted)

RECEIPTS:

Transfers In-

Appropriation From General Fund

July 1, 1994	\$4,000
